

# Data Visualization ggplot2 vs Seaborn

## BASICS

ggplot2: is a R package based on the grammar of graphics, build every graph from the same components: a data set, a coordinate system, and geoms

```
install.packages("ggplot2")
library("ggplot2")
```

```
ggplot(data = <DATA>) +
  <GEOM_FUNCTION>(mapping = aes(<MAPPINGS>), stat = <STAT>,
    position = <POSITION>) +
  <COORDINATE_FUNCTION> +
  <FACET_FUNCTION> +
  <SCALE_FUNCTION> +
  <THEME_FUNCTION>
```

Seaborn: is a library for making statistical graphics in Python. It builds on top of matplotlib and integrates closely with pandas data structures.

```
import seaborn as sns
import matplotlib.pyplot as plt
```

```
sns.<FUNCTION>
```

## ONE CATEGORICAL VARIABLE

Bar Chart

ggplot

```
d <- ggplot(df, aes(x))
d + geom_bar()
```

```
sns.barplot()
```

seaborn

## TWO CATEGORICAL VARIABLES

Grouped Bar Chart

ggplot

```
d <- ggplot(df, aes(x))
d + geom_bar(fill=z)
```

```
sns.barplot(hue=z)
```

seaborn

## ONE CATEGORICAL & ONE CONTINUOUS VARIABLE

Bar Chart

ggplot

```
d <- ggplot(df, aes(x,y))
d + geom_col()
```

```
sns.barplot()
```

seaborn

Box Plot

ggplot

```
d <- ggplot(df, aes(x,y))
d + geom_boxplot()
```

```
sns.boxplot()
```

seaborn

Violin Plot

ggplot

```
d <- ggplot(df, aes(x,y))
d + geom_violin()
```

```
sns.violinplot()
```

seaborn

## ONE CONTINUOUS VARIABLE

Histogram

ggplot

```
d <- ggplot(df, aes(x))
d + geom_histogram()
```

```
sns.histplot()
```

seaborn

Density Plot

ggplot

```
d <- ggplot(df, aes(x))
d + geom_density()
```

```
sns.kdeplot()
```

seaborn

Box Plot

ggplot

```
d <- ggplot(df, aes(x))
d + geom_boxplot()
```

```
sns.boxplot()
```

seaborn

## TWO CONTINUOUS VARIABLES

Scatter Plot

ggplot

```
d <- ggplot(df, aes(x,y))
d + geom_point()
```

```
sns.scatterplot()
```

seaborn

Heatmap

ggplot

```
d <- ggplot(df, aes(x))
d + geom_tile()
```

```
sns.heatmap()
```

seaborn

## AESTHETICS

Colour related aesthetics: colour, fill, and alpha

```
aes_colour_fill_alpha colour color fill
```

Aesthetics: grouping

```
aes_group_order group
```

Differentiation related aesthetics: linetype, size, shape

```
aes_linetype_size_shape linetype size shape
```

Position related aesthetics: x, y, xmin, xmax, ymin, ymax, xend, yend

```
aes_position x y xmin xmax ymin ymax xend yend
```

Setting themes

```
sns.set_style("whitegrid") (darkgrid, whitegrid, dark, white, ticks)
```

Choosing color palettes

```
color_palette()
```

## FACET

Facets divide a plot into subplots based on the values of one or more discrete variables.

```
facet_grid(rows=vars(x)/cols=vars(x))
```

```
sns.FacetGrid(col = x, row = y)
```

seaborn
